# Repairs

## Before

## After

Potomac Electric is an industry leader in repairs for servo motors, Spindles and Amplifiers Drive electronics, Spindle motors and Spindle integrated assemblies.

Over 15 years our engineers and technicians have developed expertise and technical know how on many different products used in Machine Tools from U.S., Japanese and European OEMs. Because Potomac is also a manufacturer, this helps us to maintain engineering talents, quality and fast turn around. Low cost repair is not enough. It needs to be done fast and it should work well every time. This is what makes us one of the best sources when your machine is down

Please feel free to call us with any questions at

1 (800) 224-4712, or visit the website.

# Parts Inventory

To better serve our customers we continue to build a large parts inventory featuring common and hard to find items. Some parts are brand new in original packaging, others have been refurbished and some are simply pre-owned. In most cases you will buy the part you need at the fraction of the cost you pay to machine tool OEMs.

All parts are tested and shipped in good working condition with a 90 day warranty. We also created a Forum where you can ask a technical question or search for a part you need. You could also sell your own parts no longer needed! The Forum is new and will take some time to grow. Put the site into your bookmarks!

When machine is down and you need a part immediately Potomac Electric is there for you.
